

THERMAL IMAGING CENTERS O F A M E R I C A

BREAST SCREENING FOR BOTH MEN and WOMEN 7 images: 6 of the breasts and one snapshot of the torso/abdomen/digestive system

One in eight women will be diagnosed with breast cancer at some point in their lifetime in US; and approximately 450 men.

The three pre-cursors to breast cancer are chronic inflammation, lymphatic congestion and estrogen dominance — only thermography can screen for and detect these — no other screening can, including mammography.

tumors of the breasts
DCIS (ductal carcinoma in situ)
inflammation in all areas of the breasts
inflammatory breast cancer (often missed by mammography)
lymphatic congestion and lymph node activity (above the clavicle and under the arms)
hormone imbalance and estrogen dominance

Results include a comprehensive report of clinical interpretive findings, any recommendations and a color copy of each image taken. **COST: \$250.00**

HEALTH SCREENING FOR MEN, WOMEN and CHILDREN (HALF BODY SCAN) 19 images: from the top of the head to the pubic bone

full cranial
deep-rooted periodontal issues (often missed on dental x-rays)
comprehensive thyroid
carotid artery
coronary issues
complete breast scan (note breast scan details)
lymphatic congestion and lymph node activity above the clavicle and under the arms
full spine (upper and lower back)
major organs: stomach, diaphragm, gallbladder, liver, large and small intestines, kidneys, ascending and descending colon, ovaries, uterus, bladder, etc.
intestinal inflammation
and more

Results include a comprehensive report of clinical interpretive findings, any recommendations and a color copy of each image taken. **COST: \$395.00**

COMPLETE FULL BODY SCREENING FOR MEN, WOMEN and CHILDREN 27 images: from the top of the head to the bottom of the feet

Our full body scan is our most popular scan and our most comprehensive study; the most complete medical scan available.

In addition to everything mentioned in the above scans, the full body scan will also screen for varicosity, phlebitis, plantar fasciitis, circulatory and nerve damage related issues, neuropathy, pancreatic issues, pre-diabetic developments and so much more

Results include a comprehensive report of clinical interpretive findings, any recommendations and a color copy of each image taken. **COST: \$550.00**
